

**Intelligent Freshwater Aquarium Stocking Calculator** to help you setup correct stocks and filters for your aquariums and tropical fish. (Build 2012 03 29)

(July 12, 2014) To those who have been wondering what's been happening to AqAdvisor - our server was attacked by a nasty malware which hijacked our domain name and mapped it to their own pages as some of you may have seen already. To overcome this, we had to move our Domain Name Provider AND our Hosting company. The migration is now completely finished and I can see huge improvements already. Our apologies to those who had to experience some down time due to this mishap. We have also installed malware scanners now which will scan our server continuously moving forward. This malware did NOT attack individual users of this site. And as a bonus, AqAdvisor was moved to even more powerful dedicated server. :)

If you enjoy using AqAdvisor.com, please help us out. AqAdvisor.com is running on its own server, and the application is rather CPU intensive. The site traffic has grown over time and we had to upgrade our server regularly whenever we experienced slow-downs due to heavy traffic load. Please help us provide fast and smooth user experience by shopping through us when you shop from Amazon. We receive a small commission if you purchase any products through the links. This has no effect on the cost of the product and is a simple way to give back to AqAdvisor.com for the effort and the hosting service we provide.

Please choose one of the following links: [Amazon US](#), [Amazon UK](#), [Amazon Canada](#), [Amazon Germany](#), [Amazon France](#), [Amazon Italy](#), [Amazon Spain](#)

**This page is bookmarkable.** If you want to come back to this aquarium setup quickly, you can bookmark this page with all tropical fishes and equipments selected. You can also post this link on other message boards to help communicate with others on your stocking plan.

**Please do post AqAdvisor link on other forum sites.** Many users have been asking if it is ok to post the link on other sites. This site has been built to share with others. More sites mean more feedback, hence more accurate results. Even non-English sites are ok - Google language works pretty well and users from more than 100 countries are already using it. We will do our best to collect as much feedback as we can from these sites.

Please [leave feedback in the forum](#) if you would like to see new species or aquarium filters currently not present in [AqAdvisor.com](#).

**To new tropical fish keepers:** [AqAdvisor.com](#) is a tool/calculator that **helps** you determine your tropical fish stocking plans. It does not guarantee that the selected species will completely get along in the long run. We are making every efforts to identify potential problems and display them as warnings, but this takes time as knowledge database grows. Through [weekly releases](#), accuracy will improve gradually. We highly recommend you to do further research, discuss results on your favorite aquarium forums and websites. Your favorite aquarium forums won't necessarily endorse or agree with the recommendations reported by [AqAdvisor.com](#). Use [AqAdvisor.com](#) to get general stocking recommendations but **do your own research** BEFORE buying any species. We highly recommend that new tropical fish keepers understock (less than 100%) their aquarium tanks.

Please read our [Privacy Policy](#).
